SUMMARY

I have over 5 years of freelancing experience in web development, building and delivering full-stack applications for a variety of clients. I have a strong foundation in OOP, data structures, and algorithms, along with expertise in modern technologies such as Next.js, React.js, HTML, CSS, TailwindCSS, TypeScript, JavaScript, and WordPress. On the backend, I am experienced with Node.js, Express.js, and Java, and I have worked extensively with databases including MongoDB and MySQL. I am skilled in implementing RESTful APIs, CRUD operations, and authentication using NextAuth and JWT. Additionally, I am proficient in Git, familiar with Docker and DevOps practices, and have experience deploying applications on cloud platforms like Vercel. I hold a BSc (Hons) in Software Engineering with a Second Class (Upper Division), and I have a strong understanding of Agile methodologies. I am passionate about continuous learning and eager to contribute and grow as a software engineer.

EXPERIENCE

2018 - Present

Freelance Web Developer & UI/UX Designer | Fiverr

- Level 2 Freelancer on Fiverr with 100% response rate and on-time delivery for over 500 projects.
- Achieved a 97% five-star rating from 400+ reviews, collaborating with 300+ international clients.
- Built 10+ Next.js web apps, including 25+ e-commerce sites with integrated payments, focusing on performance, SEO, and responsive design.

EDUCATION

2022 - 2025

BSc (Hons) Software Engineering | Second Class (Upper Division) | Plymouth University

- Gained a deep understanding of object-oriented programming (OOP), data structures, algorithms, software development life cycles (SDLC), and database design principles for creating scalable and maintainable applications.

2018 - 2021

GCE/ Ordinary Level | Advanced Level | Isipathana College

SKILLS

- **Frontend:**
Next.js React.js JavaScript HTML
CSS Tailwind CSS MUI Bootstrap
- **Backend:**
Node.js Express Java Firebase
SQL MongoDB Stripe
- **UI/UX Design & CMS:**
Figma Photoshop WordPress
WooCommerce
- **DevOps:**
Docker Git. AWS AWSS3 Vercel

PROJECTS

Event Management Platform | Next.js Multi-Vendor SaaS Marketplace

Ongoing

GitHub Link: (Private) | Website Link: <https://planitperfectevent.com/>

- Developed a multi-vendor event management SaaS for a UK client using Next.js, TypeScript, Tailwind CSS, and Supabase.
- Delivered 30+ core features, including event posting, supplier bidding, real-time notifications, secure file uploads using Supabase Storage, email automation with Resend, and live location tracking.
- Built role-based dashboards for Admins, Super admins, Clients, and Suppliers, improving workflow efficiency by 40% and supporting over 100 concurrent users.
- Payment and payout integration with Stripe onboarding and analytics dashboard for performance insights.
- Upcoming: AI-automated daily inspirational articles for SEO and upselling using n8n and generative AI.

PortfolioLink | Next.js SaaS Portfolio Creation Platform

June 2025

GitHub Link: <https://github.com/puliya2002/portfoliolink.git> | Vercel Link: <https://portfoliolink-six.vercel.app>

- Developed a SaaS platform to help freelancers and job seekers to create and showcase personalized portfolios effortlessly as my final year project.
- Designed an intuitive and responsive interface using Next.js, Tailwind CSS, Shadcn, and TypeScript, ensuring a seamless user experience.
- Built a RESTful API using Next.js API routes, integrating NextAuth.js for authentication and MongoDB for data storage, enabling secure user sessions and portfolio management.
- Implemented file uploads with AWS S3, deploy on Vercel, and hope to containerize with Docker, developed a react native mobile app for real-time portfolio updates, and added subscription functionality via Stripe.

Cinemax | React & Node.js Movie Booking System

Jan 2025

GitHub Link: https://github.com/Plymouth-University/coursework-group_91.git

- Contributed to a movie ticket booking platform with seat selection, schedules, and secure payments as part of a team of 8.
- Focused on frontend development and containerization, creating maintainable, test-driven components with React.js, Tailwind CSS, HTML5, and JavaScript, improving load times by 20-50%
- Created backend APIs with Node.js and Express.js, implemented authentication, and enabled 100% real-time seat updates with WebSocket's.
- Managed MongoDB with Mongoose, handling records, and integrated secure payment options like PayPal.
- Containerized the application with Docker and used Git/GitHub for version control and collaboration.

Green Super Market | Java Web Application

Dec 2023

GitHub Link: <https://github.com/puliya2002/GreenSuperMarket>

- Developed an e-commerce web application using Java, HTML, CSS, and SQL enabling users to browse and purchase products seamlessly.
- Blended PayPal Sandbox for secure payments, improving transaction reliability by 95%.
- Optimized backend with SQL queries, reducing query execution time by 40%.
